

GROUNDVISION
safety through insight

GROUNDVISION: 90 Day Trial Proposition

**Try before you buy – and eliminate any concerns around performance, or reliability.
Score us against the competition and calculate the benefits for yourself!**

GROUNDVISION provides a simple and cost effective system to record patient observations at the bedside and calculate EWS (Early Warning Score), MEWS (Modified Early Warning Score) and NEWS (National Early Warning Score) to ensure that deteriorating patients are quickly and accurately identified.

BENEFITS:

- Reduction in patient mortality
- Reduction in hospital length-of-stay
- Reduction in time taken to record/calculate Obs/EWS
- Improvement in the accuracy of EWS calculations
- Increased levels of clinical attendance
- Reduction in the number of unexpected cardiac arrests
- Fewer admissions to ICU
- Reduction in the number of ICU days

In addition, **GROUNDVISION** is able to record patient acuity/dependency or link existing acuity to the EWS score and calculate the appropriate staffing requirement for the ward at a given point in time. The solution supports the SNCT/Shellford model, as well as local hospital acuity models. The rich data allows the Trust to model staffing requirements over time and feed into workforce planning and rostering requirements for the future. As a result of the successful outcome to the pilot with East Surrey, we are looking to offer additional pilot opportunities to 3 other Trusts.

We are proposing a 90 day trial for a minimal cost of £15,000* which includes everything needed to participate. During the pilot period Trusts will be able to fully test the system and receive real benefits, as well as gain buy-in from all stakeholders and overcome any other obstacles, such as cultural or product credibility.

DELIVER BENEFITS QUICKLY

GROUNDVISION provides a cost effective solution that delivers benefits rapidly within the Trust without upfront investment. **GROUNDVISION**'s complete solution can be delivered via secure UK Cloud service without the need for internal infrastructure. Use on any mobile web device, tablet or PC. Alternatively mobile devices and wireless infrastructure can be supplied should this not be in place.

GROUNDVISION's unique total solution enables any hospital to leverage the benefits regardless of their current infrastructure and without significant upfront investment.

At the end of the trial if **GROUNDVISION**'s Patient Observation System is not suitable for the Trust, there is no further obligation.

To discuss this no risk offer and what would be involved, please call **Elvira Streames** on **01438 822183** or email **elvira.streames@ground-vision.co.uk**

INCLUDED IN THE GROUNDVISION 90 DAY TRIAL

- Implementation that does not impact any current system
- Pilot can be run across a maximum of 3 wards and any number of staff
- No longterm commitment required
- Mobile devices and wireless infrastructure supplied where needed
- 15 days FREE support
- Build a business case on the pilot results

“By addressing a fundamental problem in healthcare, it provides a tool which takes away reliance solely on manual recording and interpretation of complex data and information.”

Des Holden, Medical Director, Surrey and Sussex Healthcare NHS Trust and KSS AHSN.
